Full-stack engineer with 15 months of professional experience across Next.js, React, Ruby on Rails and Python. I work on the parts that decide whether software holds up in production: incremental migrations of live systems, concurrency and data-integrity faults, multi-tenant authorization, and automation of processes people were doing by hand. Available for freelance work.

EXPERIENCE

Software Engineer — Beryl Systems June 2025 — Present

- Migrated a live multi-tenant SaaS off a Rails monolith onto Next.js — seven settings modules and a six-tab profile area ported while both frontends served production traffic against one database, with no cutover window. ~120 tickets shipped to date.
- Built the coordination that stops two stacks firing the same side effect: ownership flags read by both, plus a database trigger that stands down when the legacy models own a cascade.
- Fixed production concurrency faults — lost updates under parallel event delivery (replaced with a compare-and-swap retry loop), a sync deadlocking itself by holding transactions open across external HTTP calls, and duplicate rows under concurrent submission.
- Hardened multi-tenant authorization: permission gates, server-side tenancy verification, role-scoped CSV export, and removal of unguarded legacy write endpoints.
- Automated trademark filing end to end in Rails — a headless browser (Selenium, Watir) carrying an application from first form to payment, screenshotting each step for an audit trail — and added AI-assisted fields that read uploaded specimen images to draft the required wording.
- Audited and retired dead API endpoints across the legacy codebase; built internal MCP servers connecting the team's development tooling.

CLIENT PROJECTS

NetGym — Client project · via Beryl Systems · under NDA
Next.js 15 · React 19 · TypeScript · Tailwind CSS · GraphQL · Hasura · Ruby on Rails · PostgreSQL · Python · AWS · Ably

trademarks411.com — Client project · via Beryl Systems
Ruby on Rails · Ruby · Selenium · Watir · LLM / image analysis · Background jobs

SKILLS

Frontend: React 19, Next.js, TypeScript, Tailwind CSS, TanStack Query, GraphQL / Apollo, Framer Motion
Backend: Python, Node.js, Ruby on Rails, PostgreSQL, REST APIs, Sidekiq, Hasura
Mobile: React Native, Expo, React Navigation
Cloud & Infra: AWS Lambda, AWS ECS, S3 / SQS, Docker, Terraform, CloudFormation
Practices: Legacy migration, Browser automation (Selenium / Watir), AI feature integration, Realtime (WebSockets / Ably), Observability, Git / code review, MCP tooling

EDUCATION

B.Tech, Computer Science, GLA University 2022 — 2026
